

# Appendixes

---

*Appendix A* is an excerpt from California supplement CA-4 to the National Conservation Planning Manual, dated February 1981, United States Department of Agriculture, Soil Conservation Service.

*Appendix B* includes guides for assigning land capability classes, subclasses, and units. The original documentation is a California supplement dated November 1969. Any revisions are noted in the appendix.

*Appendix C* is an edited version of the ratings guides described in the National Soil Survey Handbook, Part 620, dated November 1993, United States Department of Agriculture, Soil Conservation Service. These guides provided the basis for the interpretive ratings given in the tables Recreational development, Building site development, Sanitary facilities, Construction materials, and Water management. Soils are rated for the uses expected to be important or potentially important to users of soil survey information. Ratings for proposed uses are given in terms of limitations and restrictive features. Only the most restrictive features are listed in the tables. Therefore, if a soil is rated severe, only those soil features that cause the soil to be rated severe are given. There may be other limitations that should be overcome if the soil is to be used for a specific purpose. The guides in appendix C show in the first column the properties or features used as criteria for rating the soil for the use. The properties are listed in descending order of estimated importance. In the "Limits" column, limits of the properties are given for rating the soils and for recognizing a restrictive property or properties. In the "Restrictive feature" column, a key phrase indicates the feature causing the problem.

*Appendix D* is an explanation of the development of the erosion hazard ratings given in the "Detailed Soil Map Units" section.

*Appendix E* is the ratings guide used to develop the interpretations listed in the woodland management table.
